Open to relocation to the Netherlands, Germany and the wider EU/UK – visa sponsorship required.

PROFILE

Backend engineer with 4.5+ years building distributed, event-driven systems in Java and Spring Boot – four of them in regulated digital banking and payments, now at a UK-headquartered e-commerce platform business. Owns a loyalty platform used by 100+ retail brands and has delivered EU regulatory compliance across a full commerce stack, from pricing data through GraphQL APIs to storefront.

EXPERIENCE

THG Ingenuity **Mar 2026 – Present**
Software Engineer, Core Customer Services (Loyalty, Account & Profile) *Pune, India*

- Own the Loyalty Program service end to end – design, delivery, Kubernetes deployment and production support – a shared platform capability used by 100+ retail brands and millions of customers.
- Design and build event-driven microservices in Java and Spring Boot across Loyalty, Account and Profile, exposing GraphQL APIs to brand storefronts and ActiveMQ-backed asynchronous flows downstream.
- Co-designed and delivered EU Omnibus Directive (Article 6a) price-transparency compliance across three layers of the stack – pricing data service, GraphQL API and storefront – so every advertised discount on the market's product and listing pages is calculated from the true 30-day low rather than RRP.
- Modelled the prior-price contract end to end: persisted SKU-level price history with multi-year audit retention, derived the 30-day low over a configurable rolling window, and exposed it as one API field so consumers never scan history.
- Designed the change to fail closed and roll out safely – savings claims suppressed when a prior price is missing, and a per-site config flag let compliance go live for one market without affecting other brands.
- Extended the offers service, schema and CRUD APIs to carry prior price through the offer lifecycle, mapping 5 Omnibus price classifiers so promotion and coupon engines discount from the compliant base price; released under CAB-approved change control.
- Deploy and operate production services on Kubernetes and Helm across GCP and on-premise estates via GitHub Actions; lead cross-repository infrastructure migrations and support the Core Customer Services domain in production.

Candescent (formerly NCR Voyix Digital Banking) **Jan 2022 – Mar 2026**
Software Engineer, Transaction Gateway – Digital Banking Payments *Mumbai, India*

- Led the integration of the Transaction Gateway (TG) and Activate Enterprise (AE) banking applications in Java, Spring Boot and Kafka, moving 5,000+ financial transactions per day between systems with zero downtime at cutover.
- Engineered a secure, event-driven integration between AE and the Remote Teller (RT) platform on Kafka, sustaining peak loads of 10,000+ calls per day.
- Remediated security and performance defects raised by SonarQube, Mend (WhiteSource) and Coverity, keeping services within the security and code-quality gates required for bank deployments.

NICE Actimize **Oct 2021 – Dec 2021**
AWS Engineer Intern, Data Knights (Financial Crime & Compliance) *Pune, India*

- Managed internal datasets and improved data lake query performance at a financial-crime and compliance vendor; hands-on with AWS EC2, S3 and networking.

TECHNICAL SKILLS

- **Languages:** Java, Python, SQL
- **Backend & APIs:** Spring Boot, Hibernate/JPA, REST, GraphQL, Maven
- **Messaging & Streaming:** Apache Kafka, ActiveMQ, event-driven architecture
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Cloud & DevOps:** GCP, AWS (EC2, S3), Docker, Kubernetes, Helm, GitHub Actions, Jenkins, Git
- **Quality & Security:** JUnit/Cucumber (BDD), SonarQube, Coverity, Mend (WhiteSource); Agile/Scrum, code review
- **Languages spoken:** English (professional), Hindi, Marathi

EDUCATION

Walchand College of Engineering, Sangli **Aug 2018 – May 2022**
Bachelor of Technology, Information Technology *Sangli, India*

Achievements: Finalist, NCR Corporation Hackathon 2023 | Second runner-up, TechnoWar, WCE Sangli | HackerRank Problem Solving certificate.
